nutrition that works

AIM For Pets®

Approach

Some AIM nutrition works as well on pets as it does on humans, providing benefits in a variety of ways. Specifically, there are four AIM products that can be a healthy part of a dog or cat's daily diet.

AIM BarleyLife®

BarleyLife is one of the most common pet-friendly products because of its concentrated, nutrient-dense barley grass. The vitamins, minerals, chlorophyll, phytonutrients and enzymes in BarleyLife make it an ideal supplement to a dog or cat's daily diet.

Both dogs and cats may see benefits in anti-inflammatory activity, antioxidant ability, immune-system support and overall good health.

For dogs less than 50 pounds, AIM recommends using 1/2 teaspoon of BarleyLife once a day, mixed into or sprinkled on top of the dog's food. For dogs 50 pounds and up, the serving increases to 1/2 teaspoon two times per day. For cats, AIM recommends using 1/8 or 1/4 teaspoon of BarleyLife with food once daily.

AIMega®

AIMega and its organic seed oil blend of omega-3 and -6 essential fatty acids may help both dogs and cats improve their digestion and their coats and decrease the occurrence of cat hairballs. Additionally, they may experience health benefits for their skin and nails, as well as their cardiovascular system.

For dogs, AIM recommends using one capsule for every 20 pounds of weight (up to 4 capsules), twice daily. For a 60-pound dog, this would mean three capsules, twice daily. For cats, AIM recommends one capsule per day. To administer AIMega, open the capsules with a pair of scissors and squeeze the oil onto the food.

Key Benefits and Features

- Improves your pet's overall health
- Counteracts inflammation
- Improves coat appearance and skin health
- Maintains healthy joints
- Balances friendly bacteria
- Provides antioxidant activity and immune system support

AIM Frame Essentials®

Joint health is also an area that both dogs and cats can see benefits from Frame Essentials, which combines glucosamine complex (sulfate and hydrochloride) with methylsulfonylmethane (MSM) and boswellia extract to promote healthy joints.

For dogs under 40 pounds, AIM recommends one capsule daily. For dogs 40 pounds and above, the serving may increase to two capsules daily. Frame Essentials is best taken with food, and note that there may be a choking risk if small dogs are fed whole capsules. In these instances, it is best to sprinkle the contents of the capsule onto your pet's food. For cats, AIM recommends one capsule daily, opened and sprinkled onto food.

AIM FloraFood®

Digestive health for dogs and cats can be positively impacted by FloraFood and its combination of three good bacteria. FloraFood can help pets maintain a healthy bacterial balance in the gut.

For both dogs and cats, AIM recommends one FloraFood capsule daily with food. The capsule may be broken open and sprinkled onto or mixed into food. Do not feed the whole capsule to cats as it may get lodged in the throat.

With nutrition from AIM, you can help to keep your pets in good health.

Pet	BarleyLife servings	Frequency
Cats	Add ⅛ to ¼ tsp to food	Once daily
Dogs (under 50 lb.)	Add up to ½ tsp to food	Once daily

Dogs (up to 40 lb.)	1 capsule: open and add contents to food	Once daily
Dogs (over 40 lb.)	2 capsules: open and add contents to food	Once daily
Pet	**FloraFood servings**	**Frequency**
Cats	1 capsule: open and add contents to food	Once daily
Dogs	1 capsule: open and add contents to food	Once daily

FAQs

Can I give my pet more than the recommended amounts?

Giving your pet more than the recommended amount may result in diarrhea. Please consult your veterinarian for suggested servings that are tailored to your pet.

Are other AIM products safe for pet use?

AIM does not recommend the use of any other AIM product by pets as some ingredients can be harmful to cats and dogs. Please consult your veterinarian for suggested servings that are tailored to your pet.
